

Imaging leads: from the original sheets to today

Organizations, people and facilities: what came in, what we did, and where it stands.

1. Then and now

	Original	Now
Organizations	2,511 names and websites	LinkedIn link where one exists (1,968, 78%); social and contact fields from their own site; evidence flag
People	23,569 rows, no check that they still work there	23,248 cleaned people with confidence (high / medium / low / none), verified title and LinkedIn link where found; 18,266 high confidence
Facilities	6,478 sites, not linked to anyone	6,474 linked to their organization, with its LinkedIn and contact data
Work emails	Mostly none	298 confident, 1,133 unproven guesses, 21,817 none (will change after the Hunter run)

2. What we did, step by step

#	Step	What it did	Result	Cost
1	Clean the people list	Fixed HTML characters, split credentials, dropped website labels and organization-like strings, merged duplicates	321 junk or duplicate rows removed; 23,248 left	Free
2	Crawl organization websites	Read home, team, about and contact pages (up to 12 per site)	Emails, phones, social links and staff lists	Free
3	Match people to sites	First name then last name next to each other = confirmed	Confirmed or possible matches for most people	Free
4	Web search for the rest (Exa)	One search per person not found on the site, decision-makers first	Evidence of who works where, incl. LinkedIn pages	About \$90
5	Score the evidence	Ranked evidence from the organization site down to name-only hits	Confidence per person; contradictions flagged	Free
6	Organization LinkedIn pages	Cross-checked site link against search and Crustdata; fixed truncated or wrong links	1,968 of 2,511 with a link; 238 to review; 465 none found	Small
7	Team and title check (Crustdata)	Looked up our people at 1,313 organizations by name	Titles and LinkedIn added or confirmed; 461 titles differ; 21 LinkedIn conflicts	Crustdata credits
8	Work emails	Published emails, Crustdata, and pattern guesses checked with Emailable, ZeroBounce tests and Reacher	136 published, 11 Crustdata, 123 verified guesses	Free to about \$1 per Crustdata email
9	Hunter Email Finder test	50 top-tier names by name and domain	28 valid, 7 accept-all, 11 not found (about 60% valid)	36 credits (free)
10	Workbook	imaging-leads.xlsx with People, Organizations, Facilities, New people, Needs review, Summary	Everything above in one file	Free

3. What we deliberately did not do

No personal emails, mobile numbers or personal social accounts were collected. Only business contact data is in the files. No logins to LinkedIn or scraping of social platforms. Nothing was sent to anyone.

4. Where it stands

Item	Status
Confident work emails	298 (136 published, 11 Crustdata, 123 verified guesses, 28 Hunter)
Unproven emails	1,133 (accept-all or unverifiable guesses). Fine for small tests, not bulk sends
No email	21,817
Next	Hunter run on 3,240 decision-makers (files ready), then the remaining ~18,500 people if the hit rate holds

Item	Status
Caveat	High confidence means the person appeared with the organization on a page at the time, not that employment was checked today. Spot-check titles and emails before outreach

5. Still to review by hand

List	Rows
People needing review	about 1,744
Organization LinkedIn matches to check	238
Titles that differ from Crustdata	461
LinkedIn conflicts	21

6. Social accounts in the files

Where	Columns
Organizations sheet	linkedin_final (verified), linkedin, facebook, instagram, x, youtube: organization pages found on the site or in search
Facilities sheet	The same fields from the parent organization, prefixed org_
People sheet	linkedin_final: professional profile where found. Personal Facebook or Instagram accounts of individuals are not collected
