BILLING AND FRONT DESK

Five checks at booking that prevent a denial

Most denials were knowable when the patient booked.

The five checks

1. **The right payer and plan.** Confirm which coverage is primary. At MRI Associates, Medicare was wrongly listed as primary on nearly one in three appointments.
2. **Whether the exam needs an authorization, and whether you have it.** Match the exam and payer to your rules, and make sure the approval covers the date of service.
3. **Eligibility today.** Coverage as of the date of the exam, not the date of the order.
4. **What the patient will owe.** Copay, coinsurance and deductible remaining, as an estimate they see before the visit.
5. **Where it is written down.** Every answer on the order, with who checked it and when.

Pick one order from last week that was denied. Which of these five was knowable at booking?
