AlphaNodus

TRUST

Access, control and audit

What Gravity Trust and the product pages state.

Single sign-on

Staff sign in with their existing work accounts, so login security and password policy stay with your IT team. A change in your identity provider adds or removes the user in Gravity on its own.

Permissions

Groups control which screens and actions each person has, from built-in User and Admin to job-specific groups.

Audit trail

The record of every change, plus a timeline on each order.

You decide how much a person reviews

For order intake, review every order or only the unusual ones. For authorizations, review every run, let it finish on its own, or turn it off.

What Gravity does not do

It does not read the scan or write the report.

This sheet states only what alphanodus.com states. It claims no certifications.
