

• — REFERRAL TRACKING

One referring provider.
Every order they sent.
And where each one stands.

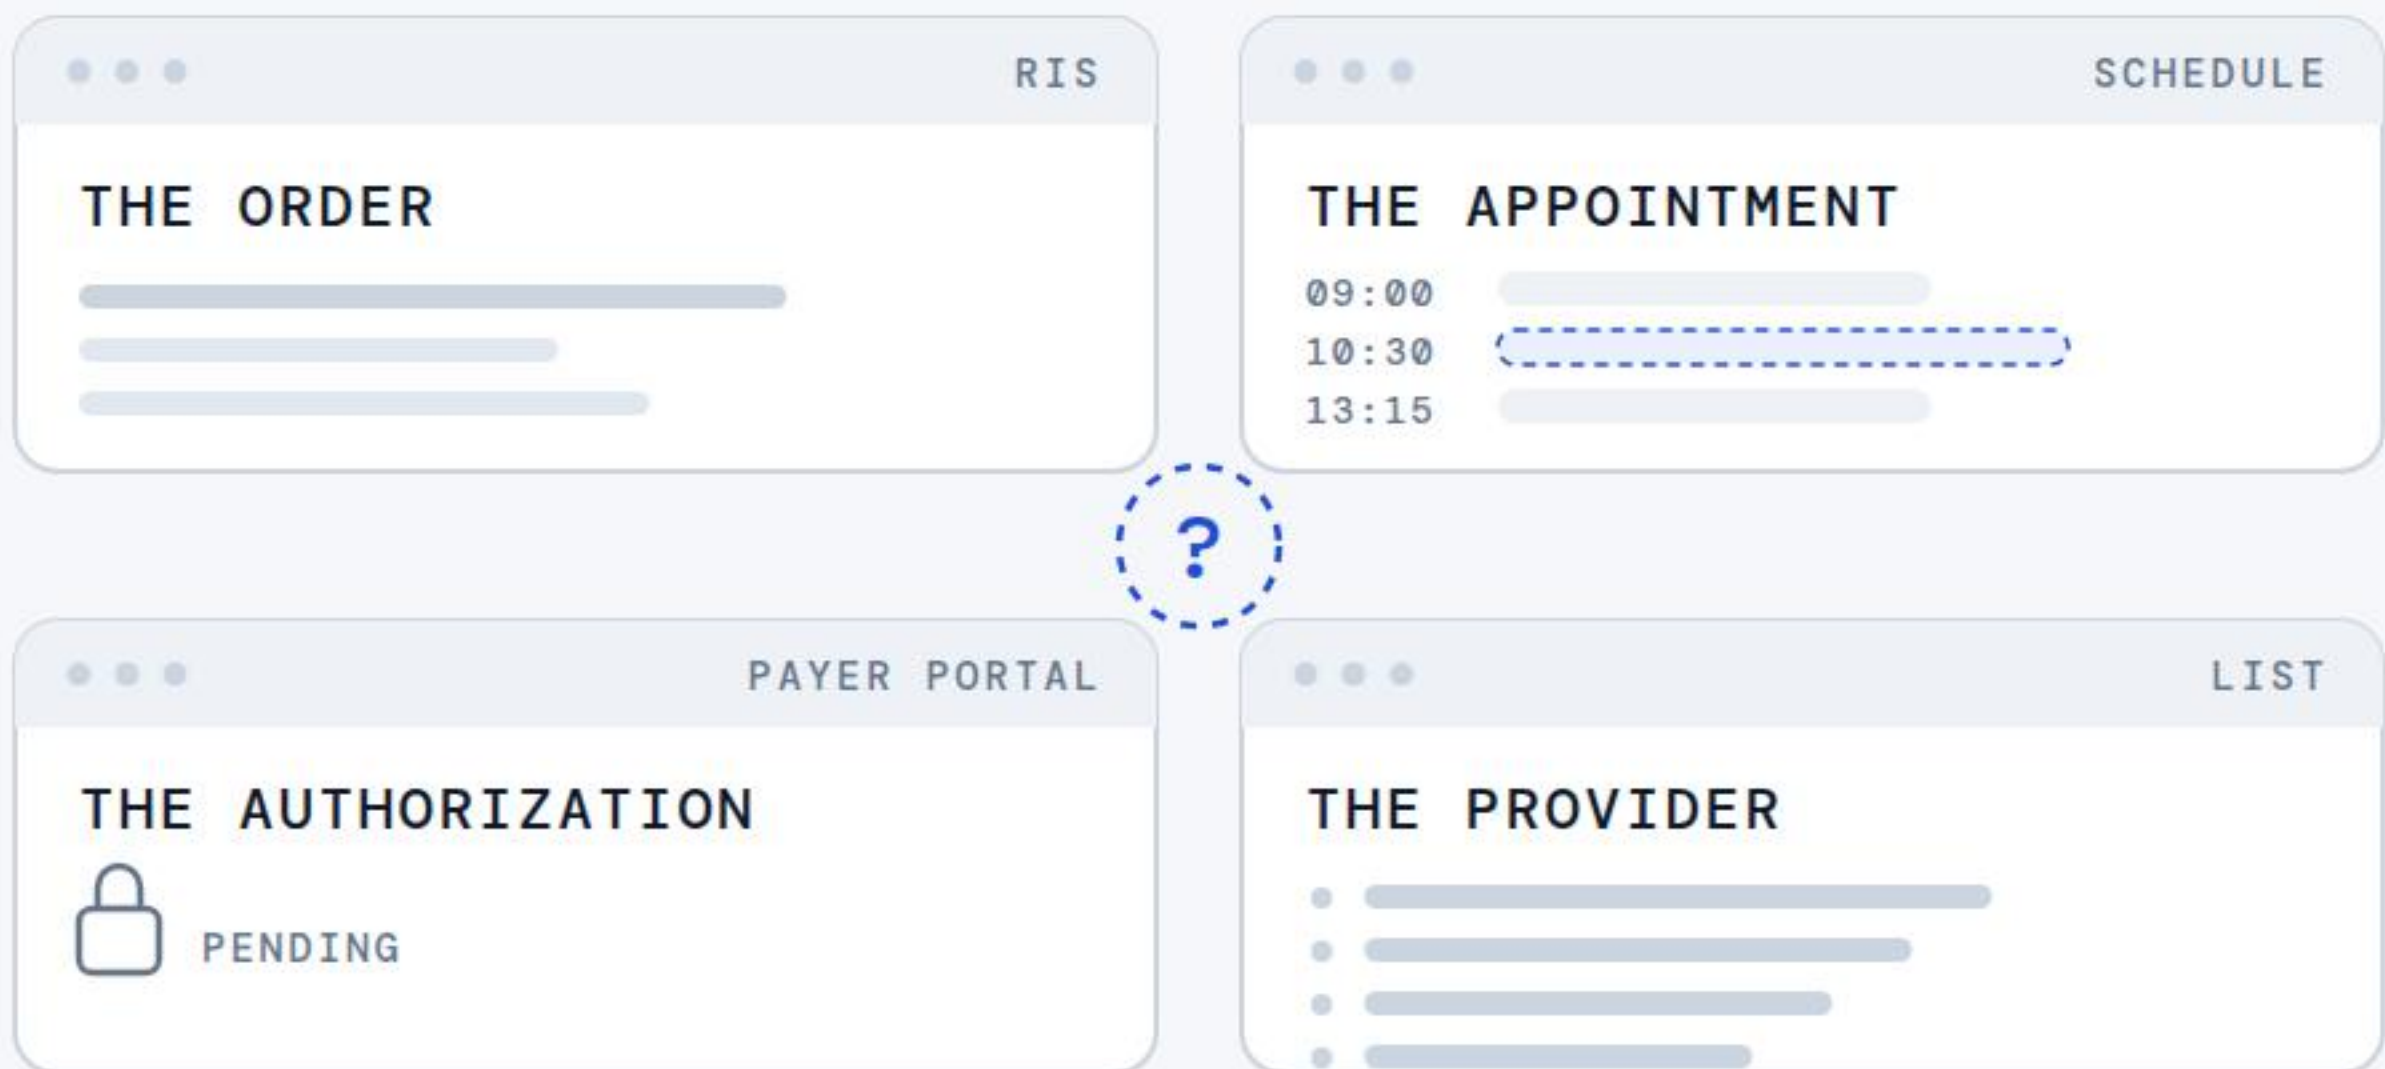

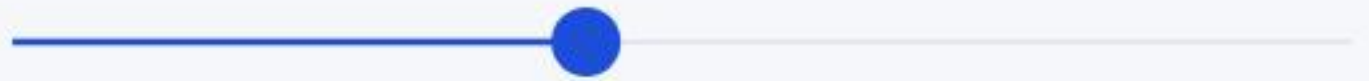

• — REFERRAL TRACKING

Where does that answer live today?

The order in the RIS. The appointment on the schedule. The authorization in a portal. The provider on a list.

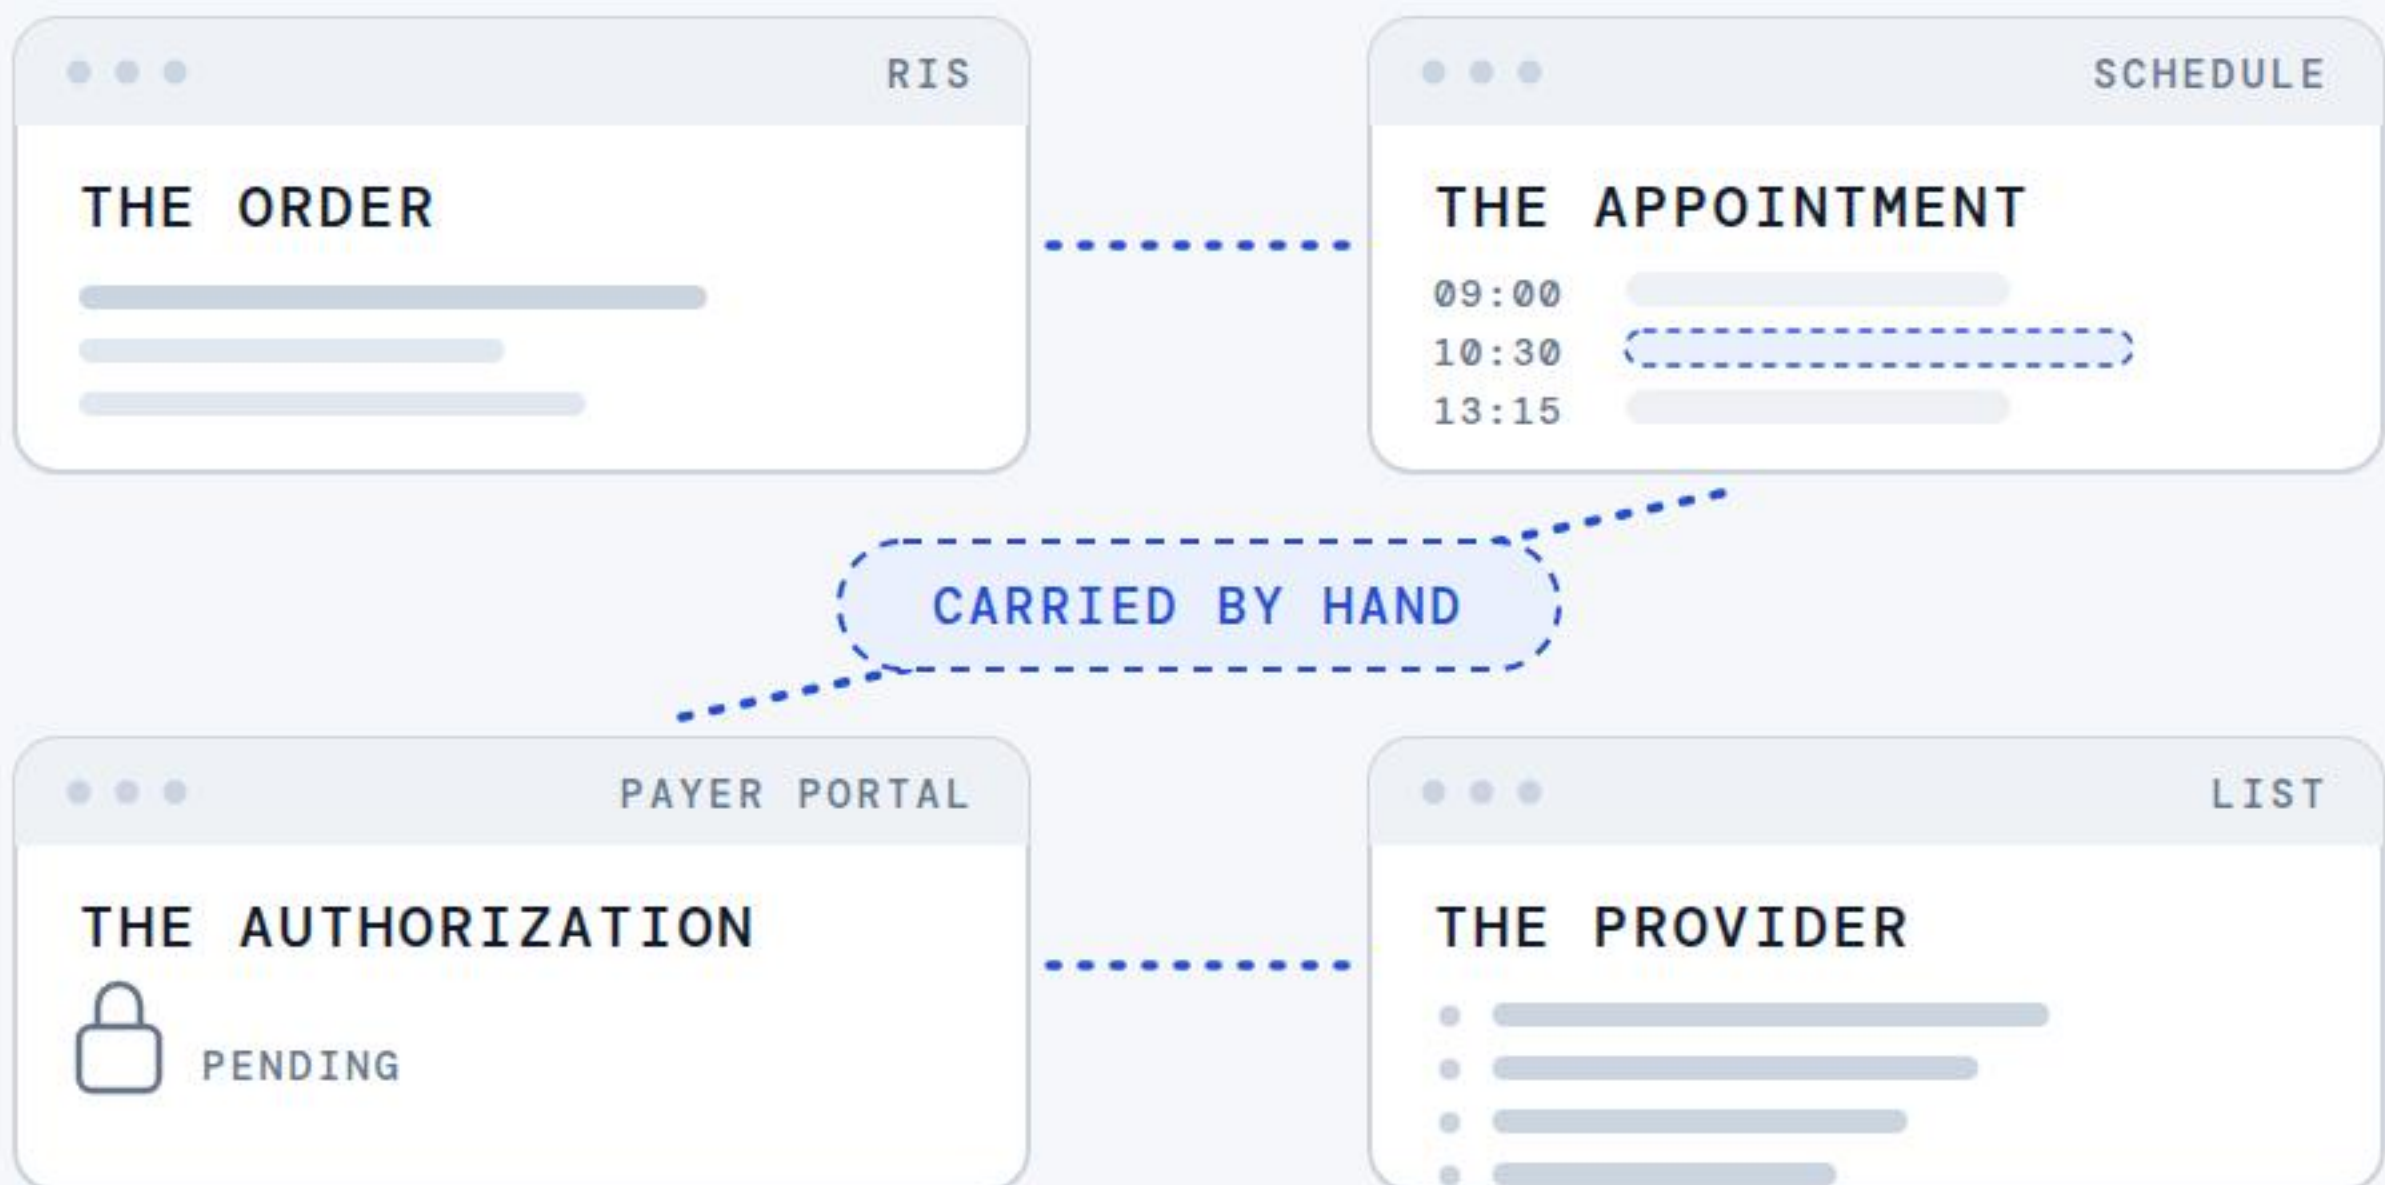

• — REFERRAL TRACKING

Four places. One relationship.

Someone carries the answer between them by hand.

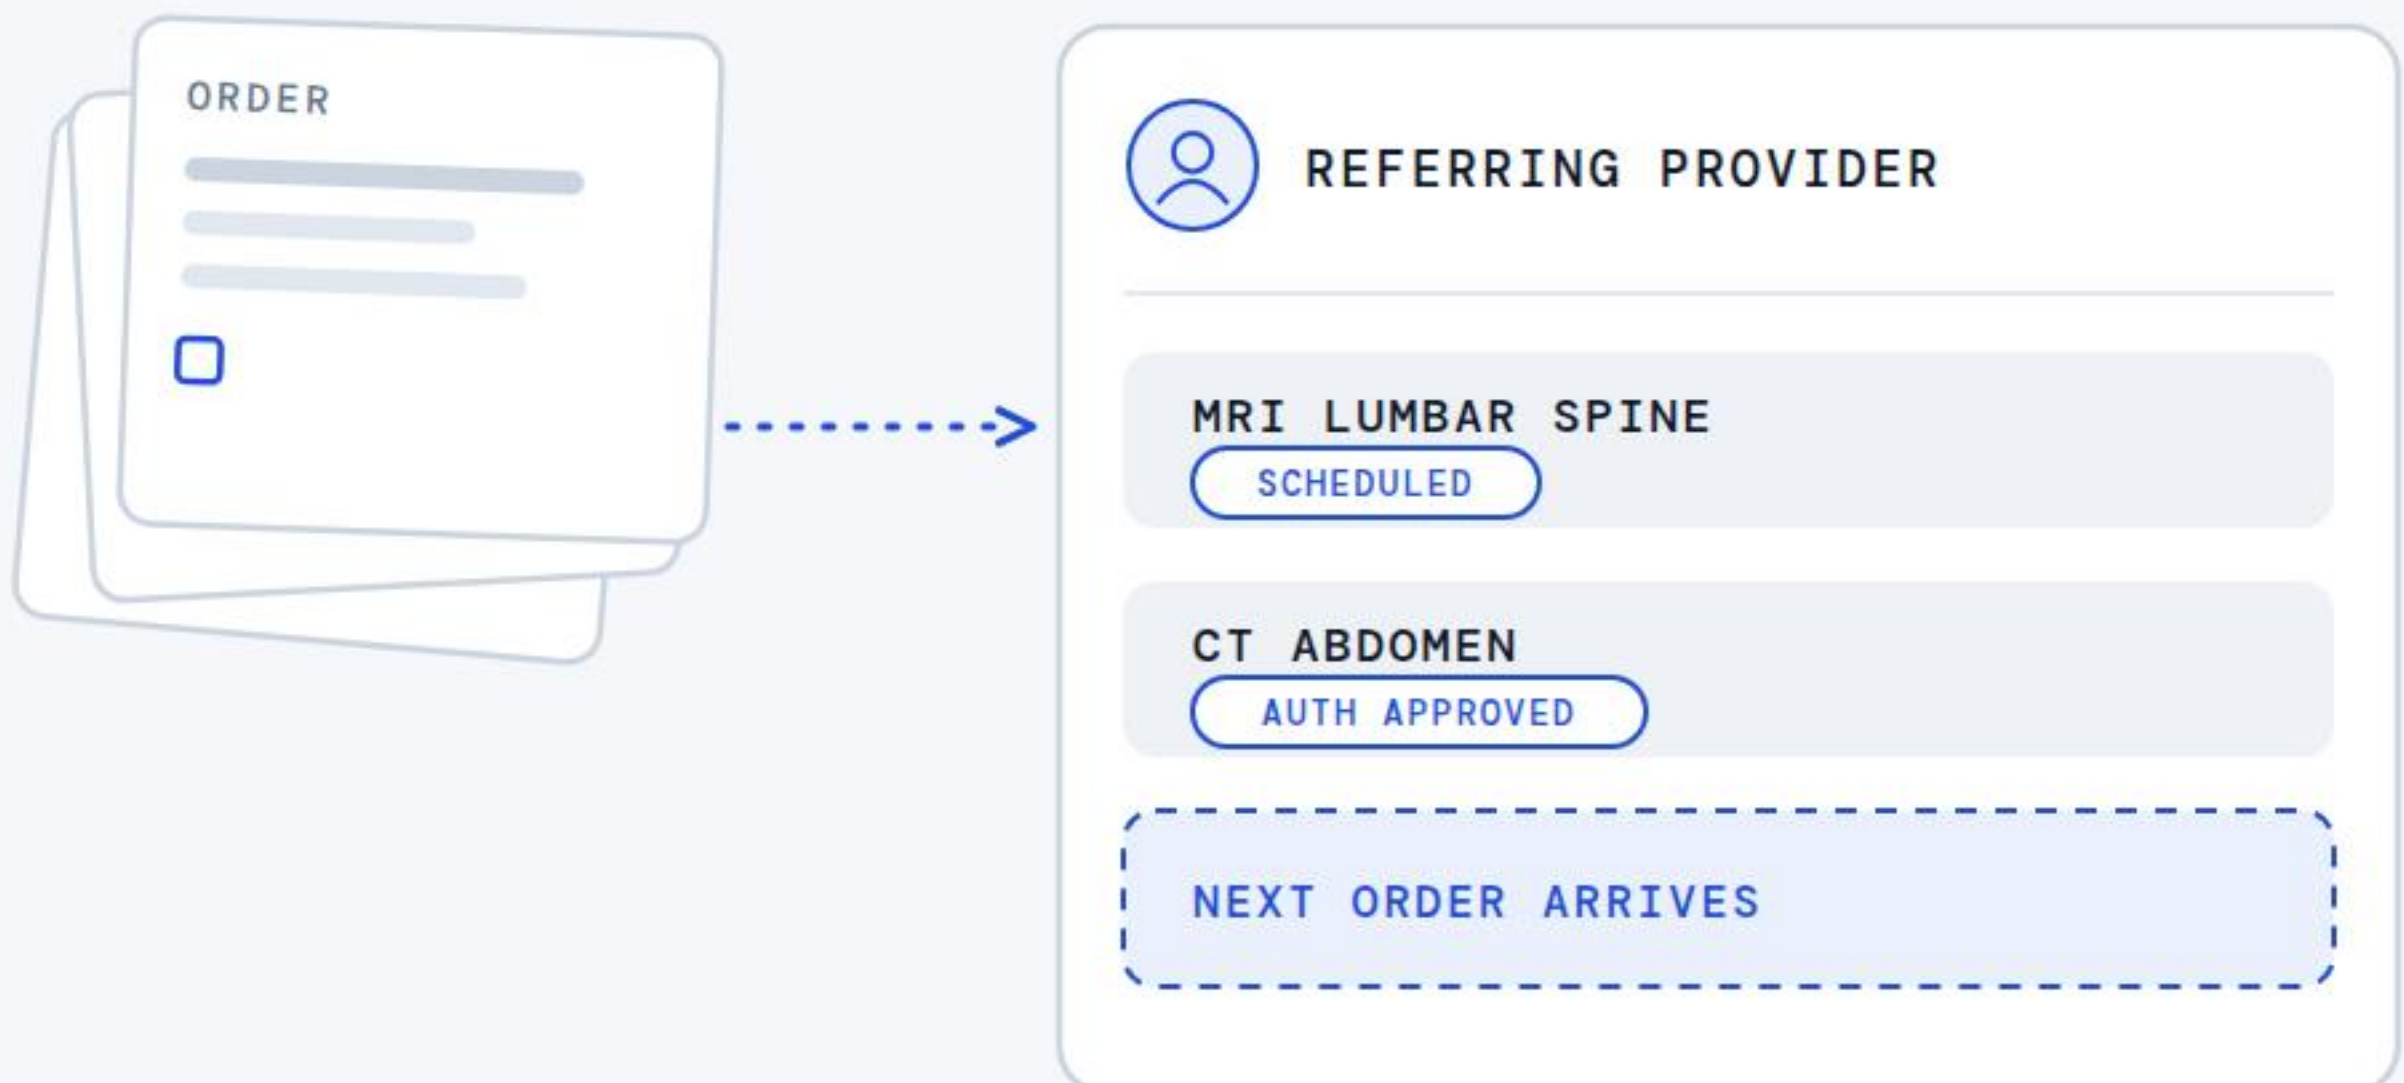

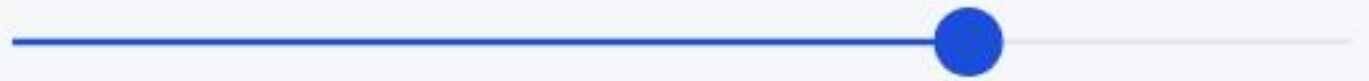

• — THE REFERRER RECORD

Built from the orders they sent.

Not a list someone keeps. Each referring provider's record fills from the orders themselves.

• — THE RECORD

One line per order

1	2	3
MRI LUMBAR SPINE SENT MONDAY	SCHEDULED TUESDAY 10:30	AUTH APPROVED SAME LINE

- 1 Service and date**
Which exam, and when the order was sent.
- 2 Appointment status**
Whether the order became an appointment.
- 3 Authorization result**
On the same line, not in a separate portal.

• — THE RECORD

How are we doing with this office? Ask the orders.

Not a guess. Not a phone call.
